

Sales Forecasting & Predictive Analytics Dashboard - Project Documentation

Project Objective

Analyze historical sales data and predict future sales trends using Power BI forecasting techniques.

Tools Used

Power BI Desktop, Power Query, DAX Measures, Forecast Analytics, and Excel Dataset.

Dataset Information

Monthly sales data from January 2022 to December 2024 with Date, Product, Region and Sales fields.

Implementation Steps

1. Imported dataset into Power BI.
2. Cleaned and validated data.
3. Created DAX measures.
4. Built KPI cards.
5. Created sales trend charts.
6. Applied forecasting.
7. Added gauge chart and slicers.
8. Designed dashboard layout.

Dashboard Components

Total Sales Card, Average Sales Card, Growth % Card, Monthly Sales Trend, Annual Sales Trend, Forecast Chart, Gauge Chart, Table Visual, Region and Product Filters.

Results

Total Sales: 3 Million
Average Sales: 71.69K
Growth Rate: 4.45%
Forecast Period: 2025–2030

Key Insights

Sales increased from 2022 to 2024.
Forecast indicates continued growth through 2030.
Dashboard supports data-driven decision making.

Conclusion

The project successfully demonstrates predictive analytics and forecasting using Power BI.
